Hello,

The team has worked to revise the SOW based on recommendations from our meetings today. In addition to the scope of work updates document we added from we added the general timeline expected from our second semester.

One important thing I would like to put on your radar is the Conceptual Design Review (CDR) meeting for our team is scheduled for Friday 9/26/2025. Our assignment submission for the presentation is due on 9/24/2025.

The only thing we are unclear on is if the final product should include the QPG6200LDK dev board or if we are to make a custom pcb that supports the QPG6200L chip.

Thank you,
Ethan Hartman

Hi Ethan,

Thanks for the heads up regarding the CDR. We can work out detailed logistics at the weekly meeting. I'm planning to attend in person regardless of location.

The QPG6200DK board is intended for development activities (prototyping circuit blocks, writing and debugging SW/FW, etc.); the final design should use only custom PCBs.

I strongly recommend a more aggressive build schedule in the second semester. Targeting 90% completion at the end of April leaves very little time for troubleshooting, whereas finished hardware in March would provide time for stretch goals, polished final presentations, and a relatively stress-free final semester.

Regards
